

FARM TO SCHOOL

Community Schools Farm to School Kits

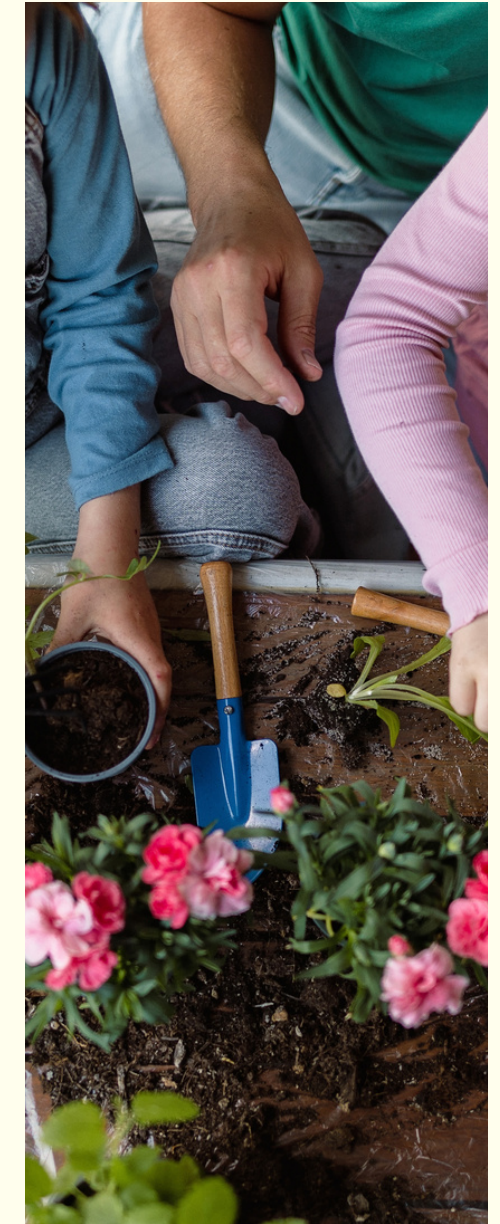

*A collaborative initiative from NMPED Community Schools
and NMPED Community Engagement*

30 NM Community Schools Recieve Garden Kits

This initiative to promote health and wellness on school campuses is a joint project from the NMPED Community Engagement team, NMPED Community School and the National Farm to School Network and Farming the Future.

The joint collaboration will offer Farm to School Kits to 30 community schools. These kits will be delivered to these schools throughout the month of October, Farm to School Month.

About the Farm to School Kits

The kits are versatile and can be easily stored until spring or utilized for a winter garden. Packed with all the essentials, they're an ideal resource for teachers looking to kickstart or rejuvenate a school, classroom, or afterschool garden program. More than just a garden, it offers a unique opportunity to connect students to core science concepts in a way that traditional textbooks simply can't.

About the Farm to School Kits

The image displays the components of a Farm to School Kit. On the left, three vertical garden beds are shown, each containing different types of plants: purple and green leafy vegetables, red and green leafy vegetables, and orange carrots. Below these, a diagram shows three horizontal garden beds, each labeled '4''. The 'FARMING THE FUTURE' logo is visible in the bottom left corner. On the right, a list of kit components is provided, including an online curriculum, seeds, a seed starting kit, soil, garden beds, landscape fabric, landscape pins, an outdoor thermometer, zip ties, and pine straw. A small note at the bottom right states that the kit is a dynamic K-12 curriculum teaching NGSS science standards through digital learning and living laboratories.

FARMING THE FUTURE

Grades 3-5

These School Garden Kits are user-friendly, easy-to-assemble, and easy-to-maintain, with raised garden bed kit. It comes complete with NGSS-aligned digital curriculum, seeds, and soil making it a perfect fit for even the smallest of outdoor spaces, as compact as a 5'x5' footprint.

Sample of Schools Receiving Farm to School Kits

Each community school that receives a kit will also fill out a quality improvement survey at the beginning and end of the initiative to measure quality of implementation and outcomes.
